Why Choose Lifetime Chimney Liners?

We offer an elite array of liners made in our own facility, right here in the USA. Because we produce every foot of our liners, we can promise that you'll get exactly what you ordered, delivered on time, every time. Each of our liners is UL listed, and covered by the Lifetime Lining System Warranty when installed by a certified solid fuel professional.

4 reasons why you should install a Lifetime chimney liner:

A flue fire, improperly vented appliance, misused wood stove, poor construction or excessive moisture can create dangerous conditions. Hazards may include fire or the release of toxic carbon monoxide gas into homes.

1

Fire Safety

Chimney fires burn hot enough that combustible framing around the chimney can catch fire right through a layer of brick. The liner is there as an essential layer of fire protection.

2

Improved Performance

A chimney liner of the appropriate size for your appliance will help improve the draft, which in turn improves the operation of the appliance.

3

Easy and Effective Cleaning

Properly sized liners provide a greater draft and the smooth, even walls minimize soot and creosote build-up which makes your clean-up job much easier.

4

Long-term Preservation

Chimney damage from water doesn't just take place on the outside. Water vapor is a result of flue gases, and this water can cause serious damage. A chimney liner provides a barrier to protect against water damage.
